

## AR3500

Recessed air curtain for commercial premises, with intelligent control

- Recommended installation height 3,5 m\*
- Recessed mounting
- Lengths: 1, 1,5 and 2 m

❖ Ambient, no heat

❖ Electrical heat: 9–18 kW

♦ Water heat W, WLL

### Application

With its concealed placement, AR3500 is very unobtrusive and with that particularly suitable for environments where the design is important.

The air curtain has many intelligent and energy saving features which provide fully automatic protection for the entrance, adaptable to each area of use.

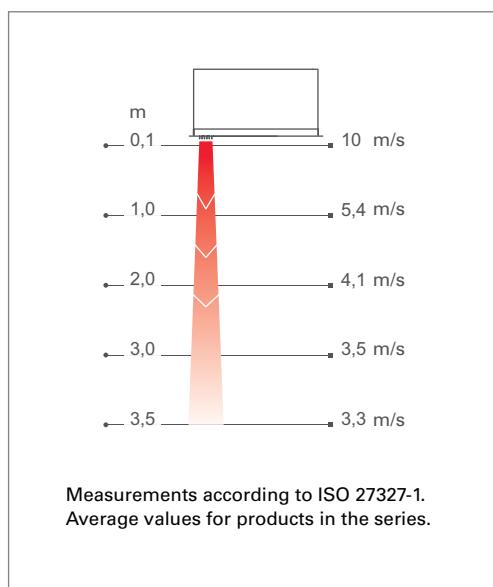

### Design

AR3500 is intended for recessed installation and the frame and hatch can be painted in colours that blend well with the premises.

Optimized airflow with  
Thermozone technology.

### Air velocity profile

### Product specifications

- Prepared for the SIRE control system whose pre-programmed default settings and many features make it easy to install and use the air curtain. Read more about the SIRE controls package in the "Controls" section.
- Possibility to integrate the air curtain with a BMS system.
- Corrosion proof housing made of hot zinc-plate and powder enamelled steel panels. Colour frame and hatch: white, RAL 9016, NCS S 0500-N. Colour grille: grey, RAL 7046. The frame and hatch can be painted in an optional colour.

\*) Recommended installation height varies depending on the relevant premises.

## Dimensions

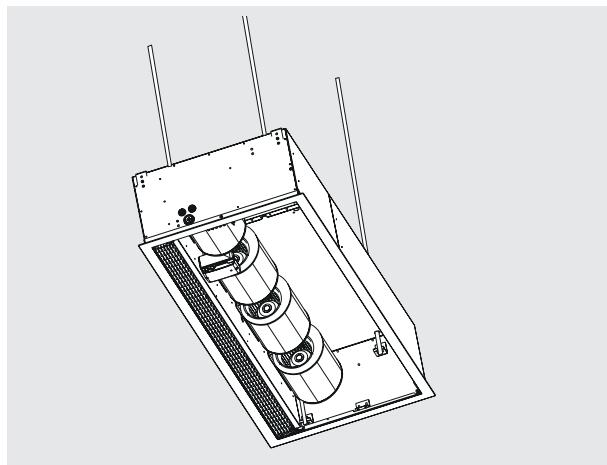

## Mounting

The air curtain is installed horizontally with the supply air grille facing downwards as close to the door as possible, concealed in the false ceiling. The only visible part of the unit is the underside which is level with the ceiling. The service hatch must be accessible, nothing should prevent it being fully opened.

The unit is ready for suspension with threaded rods on its outside. The threaded rods can also be fixed on the inside of the unit e.g. when mounted on a solid suspended ceiling.

For the protection of wider doorways, several units can be mounted next to each other. Minimum distance from outlet to floor for electrically heated units is 1800 mm.

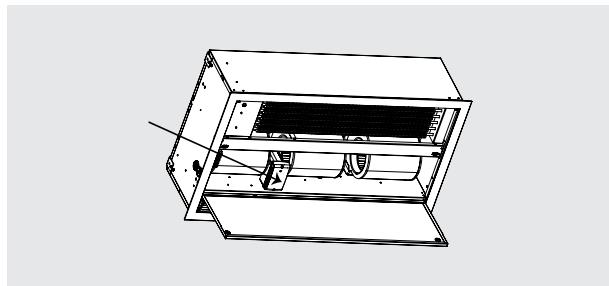

Mounting with threaded bars inside the unit.

## Connection

The PC board SIRe is built into the air curtain on delivery and is equipped with modular connectors for easy connection of external components. Read more about the SIRe control system in the "Controls" section.

### *Unit without heating*

Connected via the built-in control board with 2 m cord and plug.

PC board SIRe is built in to the air curtain.

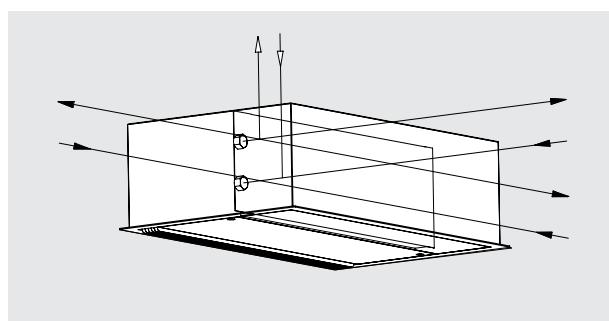

### *Unit with electrical heating*

The electrical connection is made on the side of the unit. Control (230V~) and power supply for heat (400V3~) should be connected to a terminal block in the terminal box. For units with electrical heating, power and control should be supplied separately.

### *Unit with water heating*

Connected via the built-in control board with 2 m cord and plug.

Connection of water pipes to the water heating coil is of type DN20 (3/4"), inside thread, inside the unit. Cable glands can be made from the back, top or the sides of the unit. There are pre-marked holes for drilling at these locations.

## Water control

### Choose valve kit

Water heated units that are controlled by SIRe are supplemented with valve kits. It's easy to choose the right valve kit. Look at the guide for the level of SIRe chosen - Basic, Competent or Advanced and select the valve kit which suits the system requirements and characteristics.
